ENERGY PARTNERS

GRAIN BELT EXPRESS CLEAN LINE

The Grain Belt Express Clean Line is an approximately 780-mile overhead, direct current transmission line that will deliver low-cost wind power from western Kansas to Illinois, Missouri, and neighboring states. Similar to the trains that carry grain harvested in the Midwest to markets, the Grain Belt Express will move wind energy from its source in the grain belt of the country to markets with strong demand for low-cost, clean power.

CLEAN LINE ENERGY PARTNERS

Clean Line is developing new infrastructure projects that will connect the best renewable energy resources in North America to communities and cities that lack access to new, low-cost renewable power.
